SUMMARY

IT student at Cavite State University with experience building full-stack web applications and AI-powered systems. Skilled in PHP, JavaScript, and modern web technologies, focused on developing practical software that solves real-world problems.

PROJECTS

PrintHub

June 2026

- Developed a web-based print management system with PDF submission, print customization, payment verification, and real-time queue tracking, streamlining print requests and improving workflow efficiency.

TechnoBytes Photobooth

February 2026

- Deployed and developed a photo booth system for STI College Bacoor's Foundation Day, enabling high-volume photo sessions for hundreds of students throughout the event.

InfoWhiz

September 2025

- Streamlined an AI-powered gamified learning platform integrating local and cloud LLMs (Gemini & Ollama) for real-time coding assistance, debugging, and simulation-based programming education, enhancing the learning experience through interactive, AI-driven feedback.

Club Management System

April 2024

- Built a PHP-based club management platform with role-based access, event management, and announcements, improving coordination and simplifying administrative tasks across multiple school clubs.
